# TREASURE

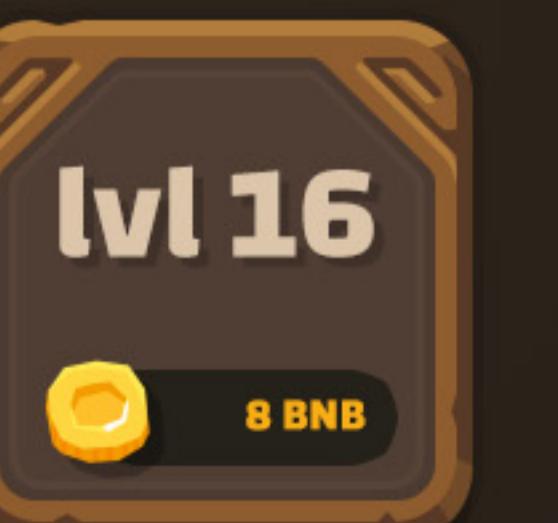

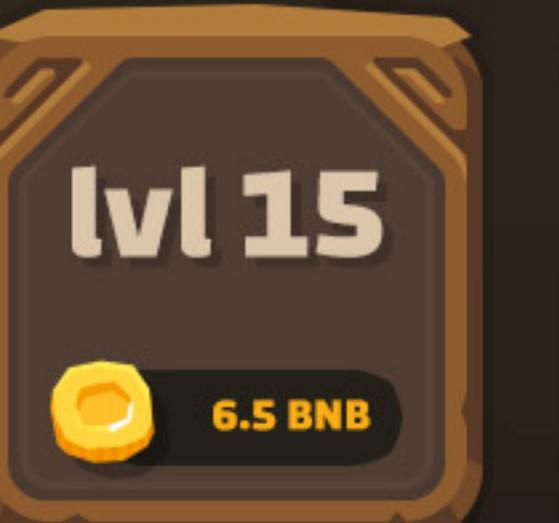

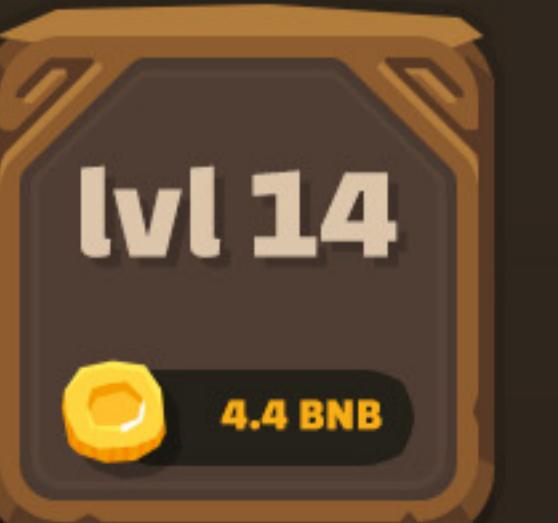

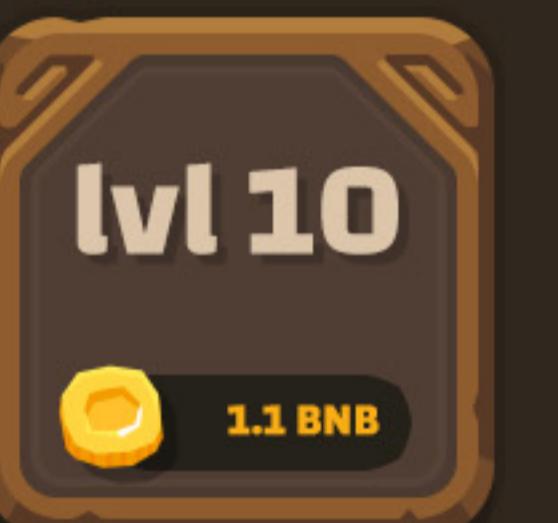

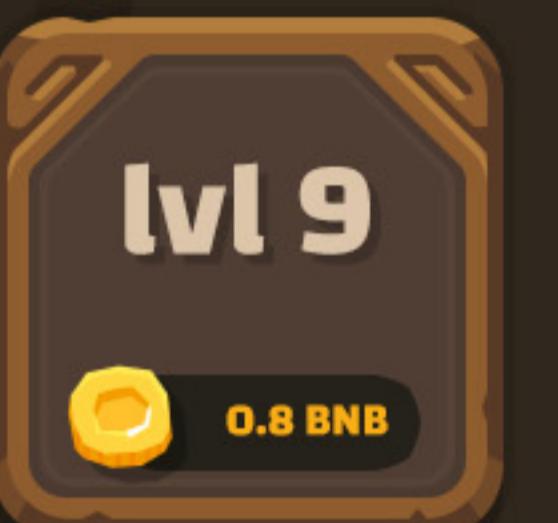

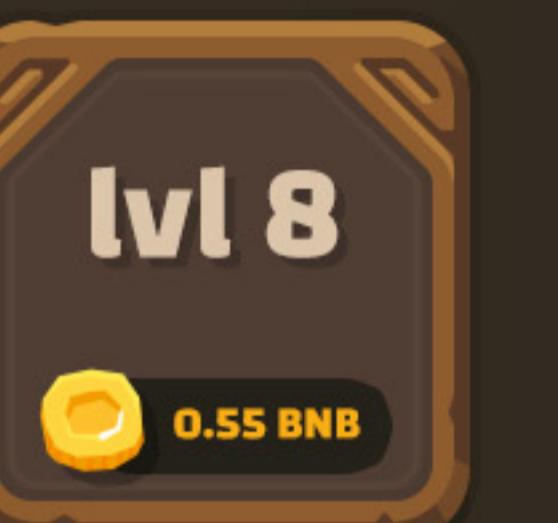

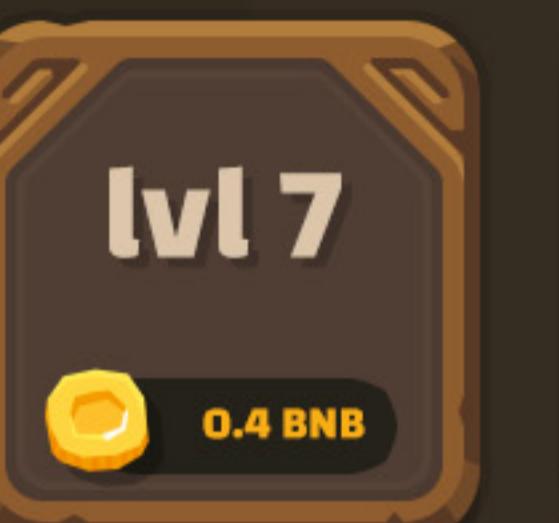

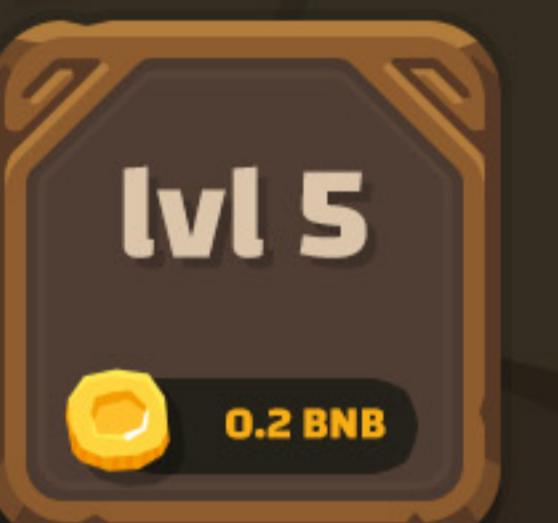

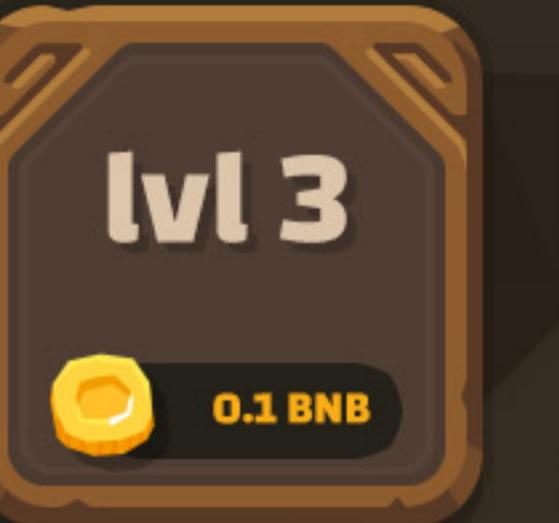

# WHAT IS TREASURE EXPRESS?

**Treasure express is a decentralized financial game. Based on Binance Smart Chain the game allows both active and passive investors to earn a significant income. To make a profit, players need to register and activate the levels one by one. Each level of the game generates an increasing amount of profit.**

## Rules

- Registration fee is 0.025 BNB (7\$);
- The cost of activation of each new level increases, as well as the profit that it generates;
- The level is available for activation only if all previous levels are already activated;
- Each activated level generates 3 payments in the amount of 74% of its value, after which the level must be activated again;
- Players have the option to automatically reactivate levels without waiting for the payout to end.

# LEVEL PRICES

**REFERRAL REWARD!**

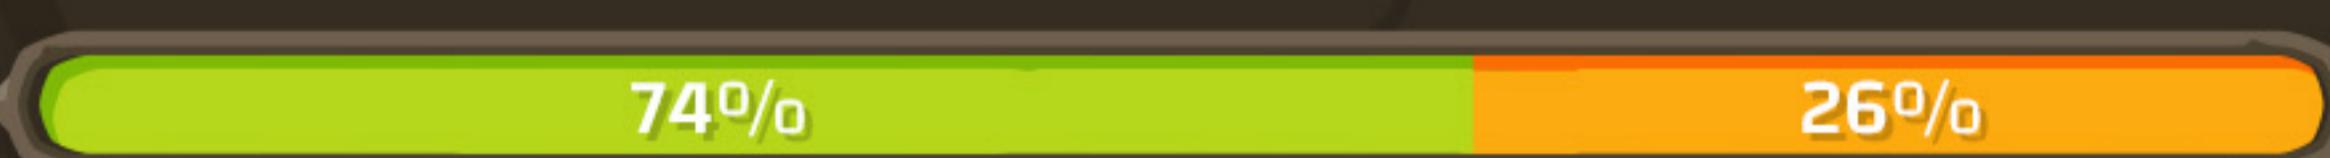

## **REFERRAL REWARDS**

**26% of the cost of the level is divided between higher players - 13%, 8%, 5%, and immediately distributed to their crypto wallets. Referral bonus comes only from active levels. If your referrals have activated a level that is not active for you, you are missing out on bonuses.**

# BONUS DISTRIBUTION

Fixed payouts for every level

Referral bonuses

# SAFETY

**The game runs on an open smart contract on the Binance Smart Chain. Funds and bonuses are not stored on the smart contract, but are immediately distributed among the players in accordance with the rules of the game. The game interface is the treasure game web app, but the danger of DDOS attacks is completely excluded - the role of the server for the game is performed by the BSC blockchain, and static files are distributed over the CDN network.**

## TRANSPARENCY

**The smart contract code of the game has been verified and is in the public access. Any player can independently explore the smart contract to make sure that the code is safe and complies with the stated rules of the game.**
